Course Name:	Web Development Laboratory	**Semester:**	**III**
Date of Performance:	___ / ___ / _____	**DIV/ Batch No:**	**B1**
Student Name:	**Parth Joshi**	**Roll No:**	**16010125090**

Experiment No: 1

Title

Design and Development of Clinical Laboratory for Different Tests in Healthcare Sector Front-End using HTML5

Aim of the Experiment

To design and develop a multi-page, use-case-based web portal front-end using HTML5 for a Clinical Laboratory for Different Tests in Healthcare Sector using Calorimeter as a Point-of-Care Technology (KJS-HC-03), demonstrating proper HTML5 document structure, semantic elements, formatting, lists, hyperlinks, images, image maps, tables, forms, and multimedia elements.

Objectives of the Experiment

- **Develop structured and semantic HTML5 web pages** for a Clinical Laboratory Web Portal using appropriate HTML5 elements.
- **Create interactive web pages** for laboratory services such as patient registration, test information, sample collection, diagnostic reports, health packages, and contact details.
- **Apply a real-world healthcare use case** (Clinical Laboratory Management System) as the context for front-end web development using HTML5.
- **Build a complete front-end web portal** that serves as the foundation for further enhancement using CSS3, JavaScript, PHP, and modern web development frameworks.

COs to be achieved

CO1: Developing webpages using HTML and CSS.

Books / Journals / Websites references

1. *(Students should write — e.g., MDN Web Docs HTML5 reference, W3C.)*

Theory

HTML5 is the latest version of HyperText Markup Language used to create structured and interactive web pages. It introduces semantic elements such as <header>, <nav>, <main>, <section>, <article>, and <footer>, which improve readability, accessibility, and search engine optimization.

HTML5 also supports multimedia elements such as <audio> and <video>, advanced form controls including email, date, number, and range input types, tables, hyperlinks, image maps, and embedded content using <iframe>. These features enable developers to build modern healthcare applications with improved usability and responsiveness.In this experiment, HTML5 is used to design the front-end of an AI-enabled Urine Test Strip Reader System. The portal provides facilities such as patient registration, urine test information, diagnostic reports, analyse details, multimedia awareness pages, and navigation between different healthcare services. The application serves laboratory technicians, doctors, pathologists, and patients by presenting diagnostic information in a structured and user-friendly manner.

Problem Statement

"Clinical Laboratory for Different Tests in Healthcare Sector"

A multi-specialty diagnostic center plans to develop an **HTML5-based Clinical Laboratory Web Portal** to provide information about laboratory tests, online patient registration, sample collection, diagnostic reports, health packages, and laboratory services. The portal will enable patients, doctors, and laboratory technicians to access laboratory information and services efficiently."

A healthcare organization wants to develop a basic HTML5-based web portal front-end for an AI-enabled Urine Test Strip Reader System. The portal should display patient information, urine test parameters, analyse concentrations, diagnostic reports, awareness material, and healthcare services for doctors, laboratory technicians, and patients.

Each task below contributes one page or feature of this healthcare portal, representing different modules of the Urine Test Strip Reader system.

Task 1: Create the Homepage Structure

Scenario

Design the homepage of the Clinical Laboratory Management System.

Requirements

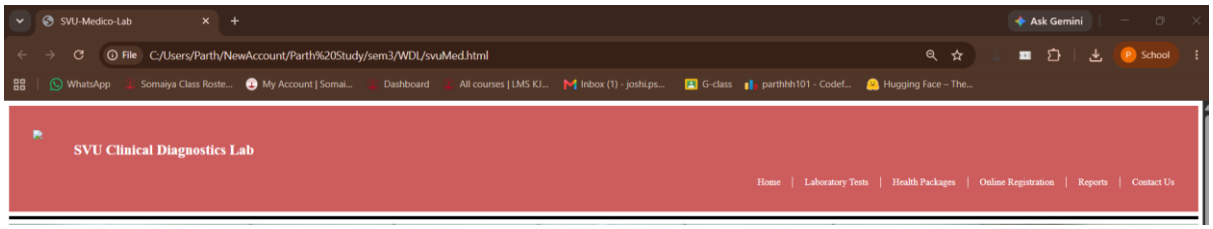

- Use proper HTML5 document structure tags:
  - <header>, <nav>, <section>, <article>, <aside>, <footer>
- Header must contain:
  - Laboratory Name in <h1>
  - Tagline: **"Accurate Diagnostics for Better Healthcare"**

- Navigation menu with links:
    - Home
    - Laboratory Tests
    - Health Packages
    - Online Registration
    - Reports
    - Contact Us
- Footer with copyright information.

Concepts Tested

- HTML5 document structure
- Semantic elements
- Headings
- Hyperlinks

Deliverable: index.html

Task 2: Display Laboratory Tests using Lists

Scenario

Display various laboratory services offered by the diagnostic center.

Requirements

Create

Ordered List

- Patient Testing Process
    1. Patient Registration
    2. Sample Collection
    3. Laboratory Testing
    4. Report Generation
    5. Doctor Consultation

Unordered List

- Types of Laboratory Tests
    - Blood Tests

- Urine Tests
- Thyroid Profile
- Liver Function Test
- Kidney Function Test
- Lipid Profile
- Diabetes Tests

Description List

Explain

- CBC
- HbA1c
- LFT
- KFT
- ECG

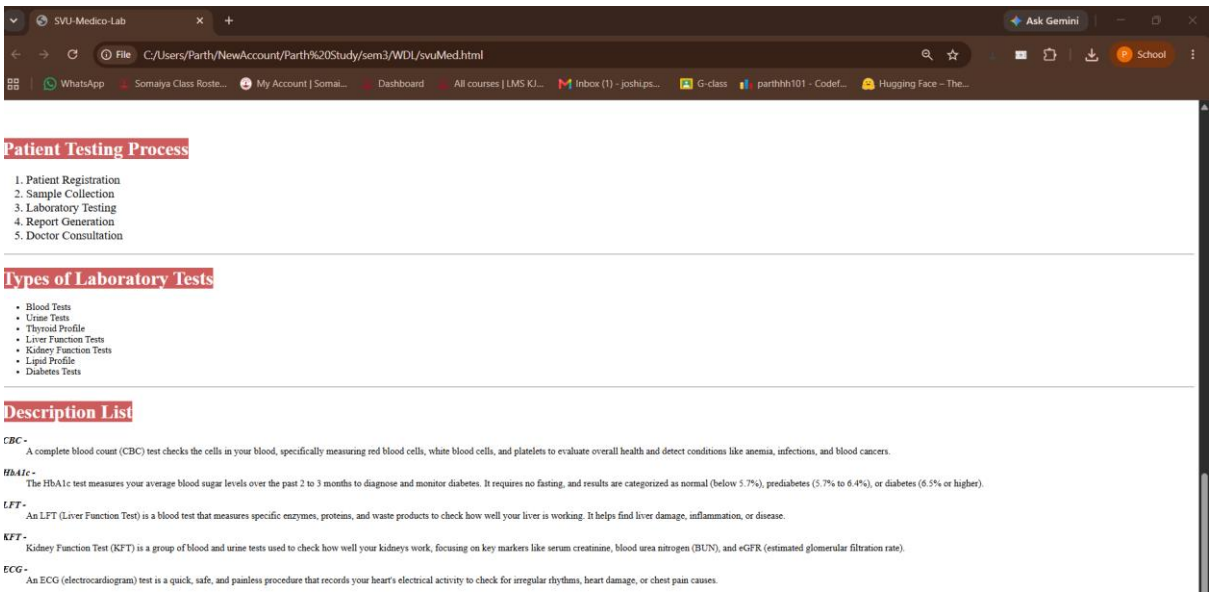

Use formatting tags

- <b>
- <i>
- <mark>

Concepts Tested

- Lists
- Formatting Tags
- Text-Level Formatting

Deliverable: laboratory-tests.html

Task 3: Laboratory Test Details Page

Scenario

Create a page displaying complete details of a diagnostic test.

Requirements

Display

- Test Name
- Purpose
- Sample Required
- Preparation Instructions
- Normal Reference Range
- Report Delivery Time

Highlight

- Important Instructions
- Fasting Requirements

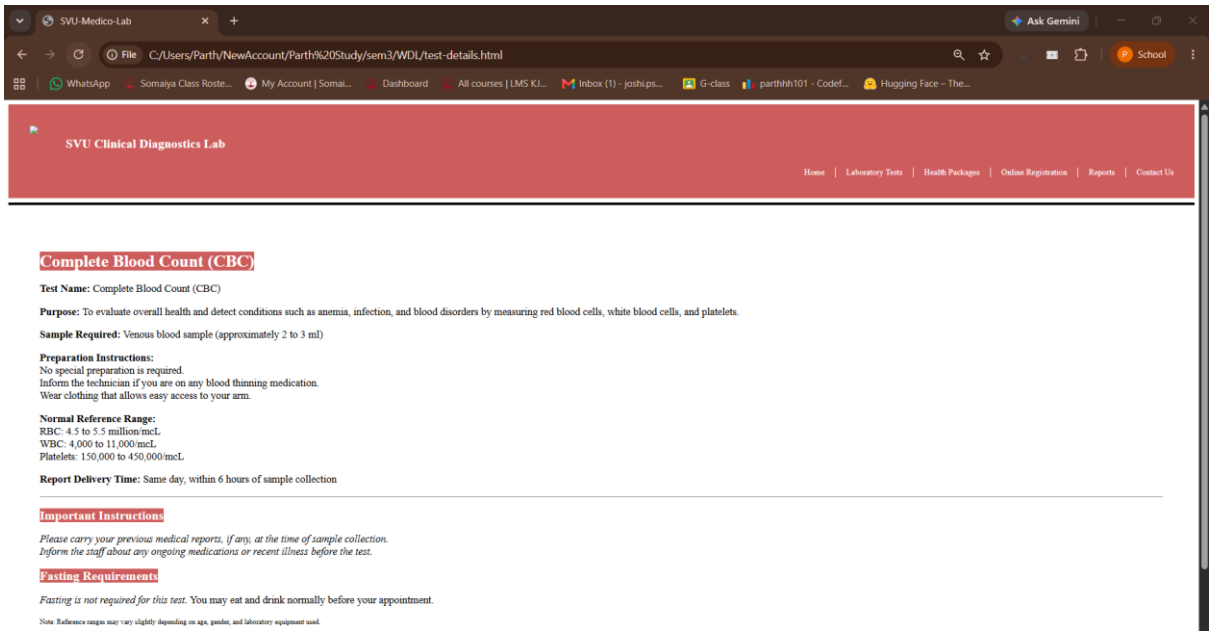

Use

-
-
- <mark>
- <small>
-
- <hr>

Concepts Tested

- Block-level Elements
- Inline Formatting
- HTML Formatting Tags

Deliverable: test-details.html

Task 4: Laboratory Gallery using Images

Scenario

Create a gallery showcasing laboratory infrastructure.

Requirements

Display images of

- Clinical Laboratory
- Blood Collection Room
- Automated Analyzer
- Sample Processing Area

Each image should

- Open a detailed information page
- Include
  - alt
  - title
  - width
  - height

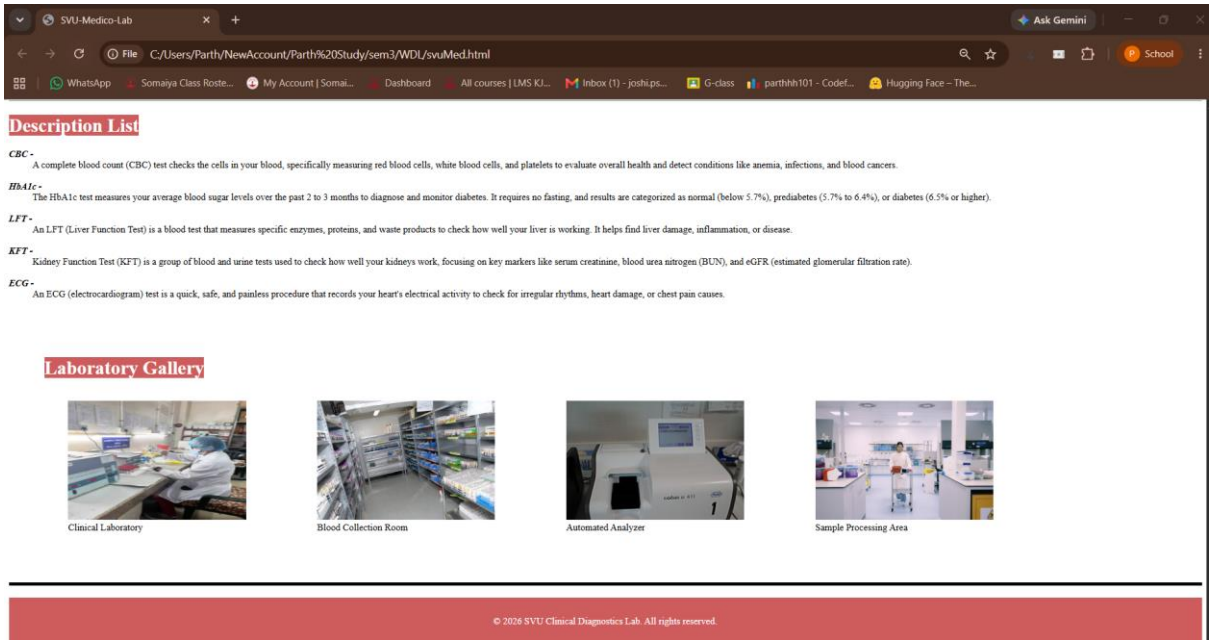

Use

- <figure>
- <figcaption>

Concepts Tested

- Images
- Hyperlinks
- Global Attributes

Deliverable: gallery.html

Use

- <map>
- <area>

Task 5: Interactive Image Map of Test Strip

Scenario

Provide an interactive urine test strip.

Requirements

Display a urine test strip image.

Create clickable regions for

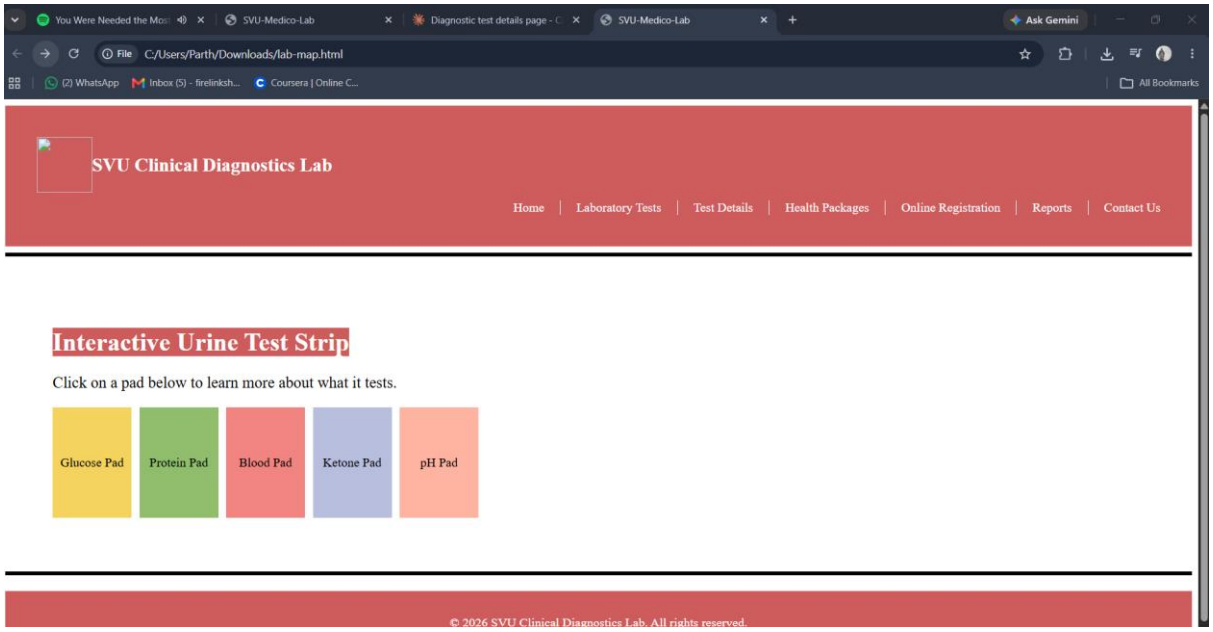

- Glucose Pad
- Protein Pad

· Blood Pad
· Ketone Pad
· pH Pad

Concepts Tested

· Image Maps
· Hyperlinks

Deliverable: lab-map.html

Task 6: Laboratory Test Price Table

Scenario

Display available laboratory tests and charges.

Requirements

Create a table with

· Test Code
· Test Name
· Department
· Cost
· Sample Type
· Report Time

Use

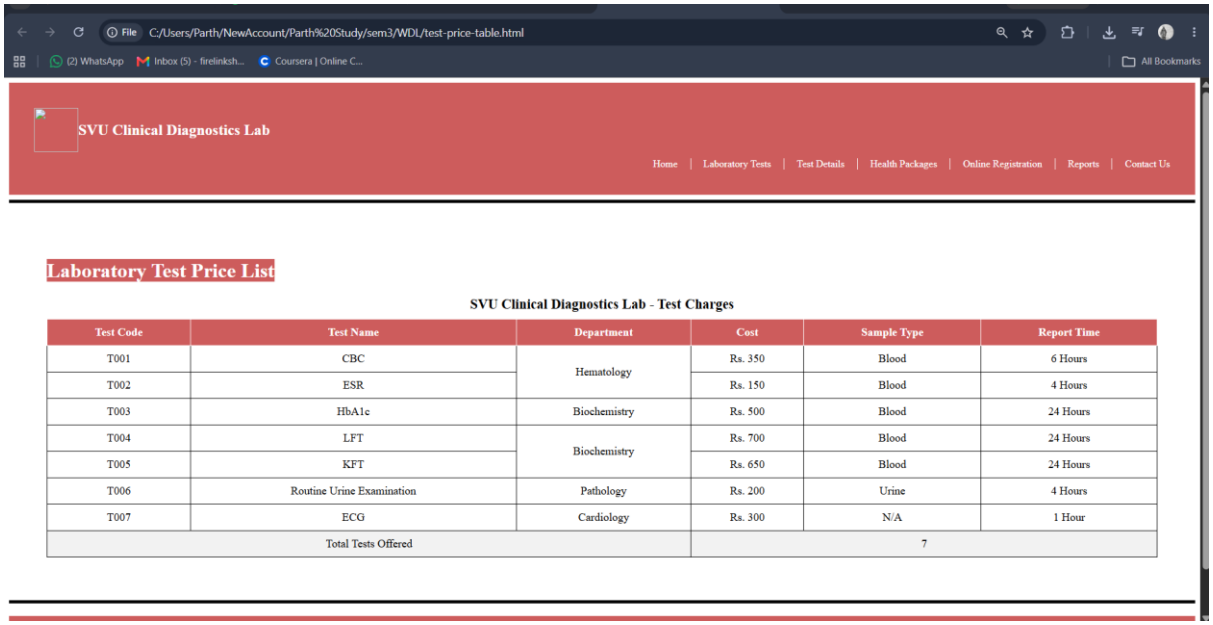

- <caption>
- <thead>
- <tbody>
- <tfoot>
- rowspan
- colspan

Apply suitable formatting.

Concepts Tested

- HTML Tables
- Table Formatting

Deliverable: test-price-table.html

Task 7: Online Patient Registration Form

Scenario

Develop an online patient registration page.

Requirements

Create form controls for

- Patient Name
- Age
- Gender
- Mobile Number

- Email
- Date of Birth
- Test Selection
- Preferred Appointment Date
- Sample Collection Preference
- Upload Doctor Prescription

Include

- <label>
- <fieldset>
- <legend>

Apply HTML5 validation

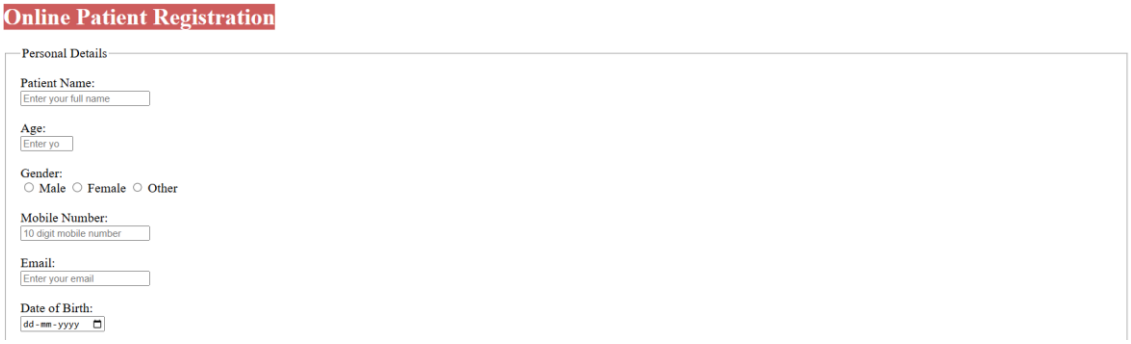

- required
- placeholder
- pattern
- autofocus

Concepts Tested

- HTML Forms
- HTML5 Input Types
- Validation Attributes

Deliverable: patient-registration.html

Task 8: Embed Health Information using IFrame

Scenario

Provide useful health resources for patients.

Requirements

Embed

- National Health Portal
- Google Maps showing laboratory location

Use

- <iframe>

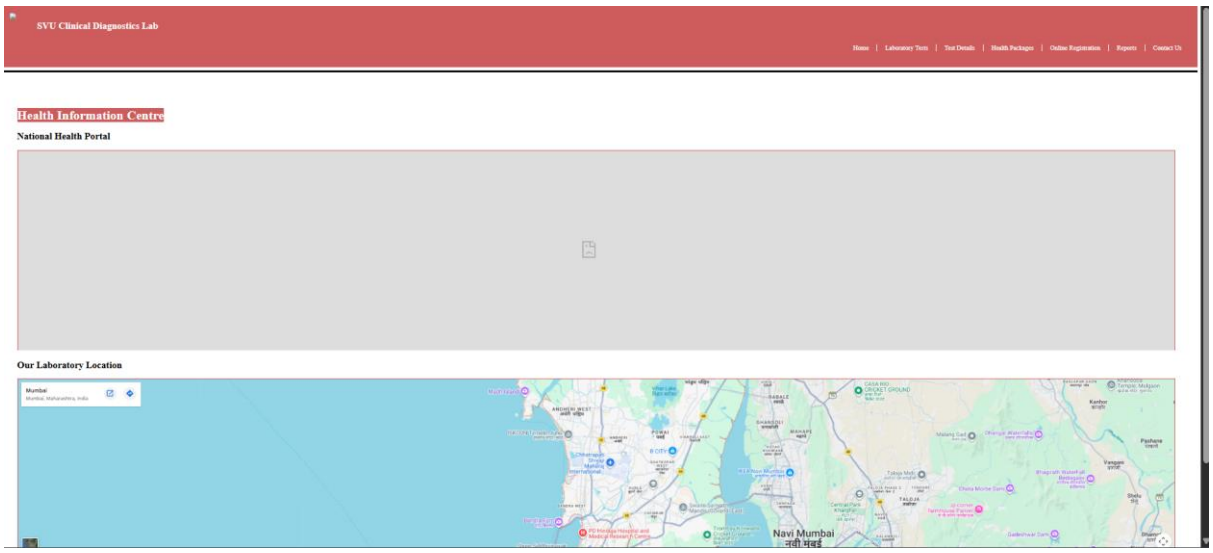

Place the content under

Health Information Centre

Concepts Tested

- IFrame
- External Web Resources

Deliverable: health-information.html

Task 9: Add Multimedia & Executable Content

Scenario

Create a patient awareness page.

Requirements

Add

- Video explaining laboratory sample collection procedures
- Audio instructions for patients before testing
- JavaScript alert

Welcome to the Clinical Laboratory Management System

Use

- <video>
- <audio>
- <script>

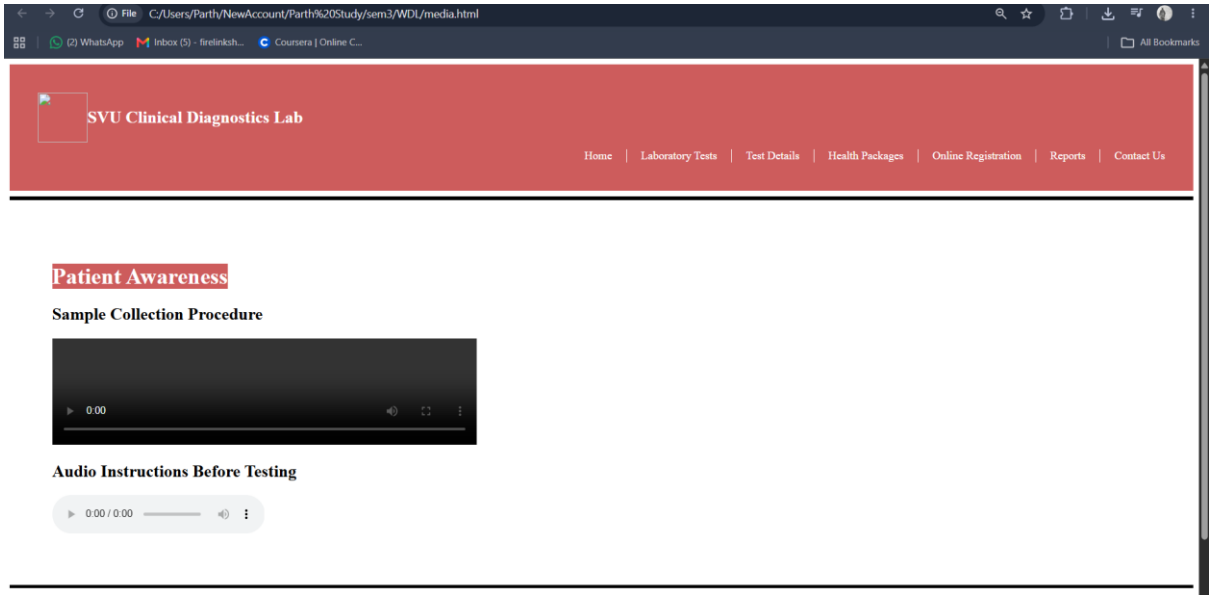

Enable

- controls
- autoplay
- loop

Concepts Tested

- Multimedia
- JavaScript
- Executable Content

Deliverable: media.html

Code :

```

Output / Screenshot:

ALREADY PASTED UNDER EACH TASK

Conclusion and Discussion:

This experiment demonstrated key HTML5 concepts including tables, forms with validation, image maps, multimedia elements, and iframes, enhancing understanding of structuring interactive, accessible, and well-formatted web pages for real-world applications.
